Upcoming July, 2017 Classes

See the ACL website agecomputer.org for complete class description and future classes.

[REGISTER ONLINE](#) (Classes will be cancelled **48 hours** ahead if not enough enrollees.)

Basic Computer Tasks

[Understanding Your Computer](#) (Monday, July 10 at 10:00 a.m. – \$25)

Computers have a way of doing strange things and have strange ways of telling you. We will first cover basic things you need to know about your Microsoft Windows computer. For example, do you need all those icons on your desktop? How can you navigate around in your computer when you need to find things? We will then discuss Windows tips and tricks like: Do you know where to look on your display for the things you want to do? Does email cause you problems?...and more.

Apple® Devices

[Expanding your Apple Computer Knowledge](#) (Thursday, July 13 at 1:00 p.m. – \$25)

This class is to enhance or expand your knowledge and ability to use some of the Apple features. Some of the ideas we can cover include the following: How to install applications; change icons or remove icons from the bottom dock; use some of the advanced features of Photos; browse through your files within Finder. If you have a specific question, such as more information on backups, why is it important to update apps, etc., we can cover all questions during the class time.
